

SURFACE PAVE - R4

Surfaces that look great and last great

**A Flexible UV Resistant
Anti-Skid Coating
System for Outdoor and
Indoor applications**

Surface Pave -R4 is a high quality Acrylic coating for large scale anti-skid application. This is a colour steadfast, seamless, coating that is applied over Asphalt or Concrete surfaces to provide an anti-skid reading of 64 BPN.

The toughened glass crystal aggregate is produced with rounded edge to enhance the safety of floor users and it comes in a variety of grade sizes to suit any application. Glass crystals are naturally harder than metal, making the system very hard-wearing and durable - perfect for multiple applications.

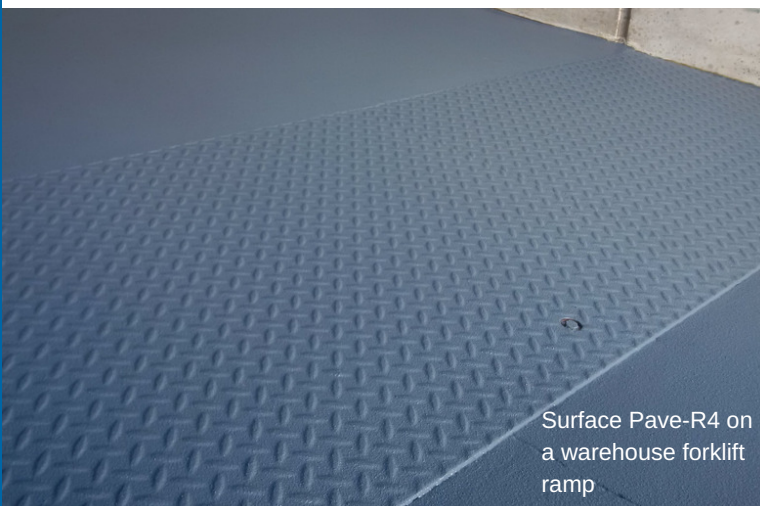

The reflective nature of crystal means the color will remain vibrant even under weathering and aging conditions which cause wear to the surface.

Key Features

- Water Based
- Slip resistant
- High durability
- Flexible
- Color steadfast
- UV stable
- Greatly reduced tyre noise

Applications

- Pavements & Walkways
- Cycle Lanes
- Bus Lanes
- Airports
- Industrial flooring
- Multi-Level Car parks
- Shopping Malls
- Ramps

Surface Pave-R4 Product Information

- Pave-R4 is a water based 2-pack modified acrylic
- Low odour & easy to apply
- Pave-R4 uses recycled glass aggregates
- The hard wearing surface is excellent for high traffic areas and can be used on ramps.
- Pave-R4 is a Low sheen / matte finish - this is a key safety feature in traffic and car park environments, especially in the wet.
- Every Pave-R4 coating system is specified to suit your application. It is much more than just a paint.
- Surface primers and a series of base layers form part of every Pave-R4 system to ensure it's success
- Pave-R4 comes in a standard colour range. It can also be mixed in any International Standard RAL colour. This may depend on volumes as it is done at the time of manufacture.

Typical applications for Surface Pave-R4

Standard Colours

Red, Burgundy, Brilliant Blue, Deep Green, White
Apple Green, Dark Grey, Light Grey, Turbo Yellow

Custom colours are also available

Case Study - Warehouse Forklift Ramp

Scope - Install a durable anti-skid coating to a forklift ramp to improve traction and safety.

Steps taken

1, Diamond grind off all existing coatings

2, Apply base primer coating.

3, Apply Re-surfacer cementitious layer - hand grind to a smooth surface

4, Apply Moisture barrier layer

5, Apply first coat Grey Pave-R4 followed by a top coat once cured

6, Apply 1 coat of clear sealer for additional protection.

Result- An attractive non-skid surface for the forklift driver.
