

# SURFACE SuperGrip KT-02

*Surfaces that look great and last great*

**High Friction Resin  
Surfacing System Using  
Sustainable Aggregate.**

**SuperGrip KT-02** is a high friction polyurethane resin surfacing system for applications that need extra grip. SuperGrip KT-02 consists of a broadcast layer of coloured recycled glass crystals bound together with a flexible resin binder.

Heavy grade crystals make it an excellent solution for cycling tracks, bus lanes, accessible car parks & drive ways that need extra grip. The finished product is an abrasion resistant, seamless, low-reflective, uniform surface - coupled with strong anti-crush high flexural strength coating system. Coupled with Surface NZ's unique maintenance programme - SuperGrip KT-02 has a very economical LCC (life cycle cost)

## Key Features

- High wear resistance
- High Skid & Slip resistance
- Flexible, non brittle
- Seamless
- Non flammable
- Colour steadfast
- High UV resistance
- Sealed surface

## Applications

- Coloured Walkways
- Cycle & Bus Lanes
- Accessible Car parks
- Resurfacing Asphalt

*Surfaces that look great and last great*

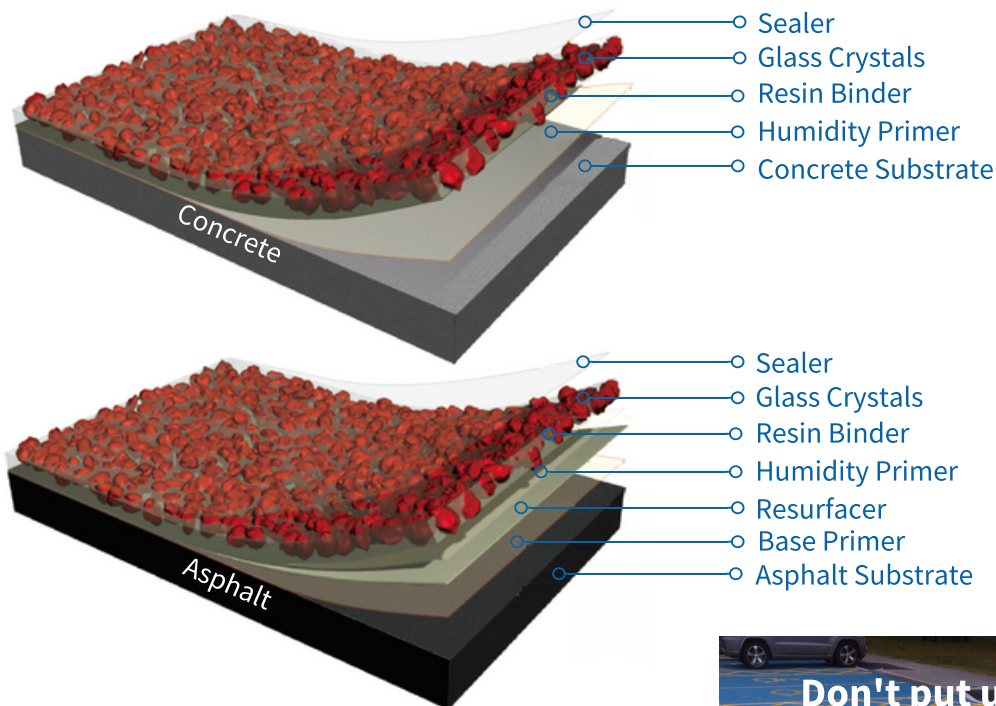

Traditional systems mostly consist of a Resin with Aggregate broadcast on top.

**SuperGrip KT-02 is a complete system which incorporates thorough base preparation steps followed by carefully selected layers and a sealer top coat to hold it firm for many years.** This is a system designed to last the distance and it is backed up by Surface NZ's unique maintenance programme.
